### **DETAILED ACTION**

1. This communication is in response to Applicant's amendment filed December 20, 2007. Claim 38 has been canceled. Claims 2-4, 6-8, 11-20, 27-29, 34-37, and 40 are currently pending in this case.

#### ***Double Patenting***

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

3. A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to

Art Unit: 3621

be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 34, 39 and 40 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 7,124,094. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 1 of U.S. Patent No. 7,124,094 recites:

A server comprising:

- an acquiring section to acquire information regarding a copyright protection level of a printer client which requests the server to send data;

- a specifying section to specify data to be sent corresponding to the copyright protection level of the printer client, the data being classified in different copyright protection levels according to a content of the data;

- a sending section to send the specified data to the printer client; and

the printer client comprising:

- a receiving section to receive the specified data sent from the server;

an output section to print out the received data,

- wherein, the server further comprises a comparison table for recording a copyright protection level of the data and a copyright protection level of the printer client in relation to each other,

- wherein the specifying section specifies the data to be sent with reference to the comparison table.

5. Claim 1 of U.S. Patent No. 7,124,094 differs since it further specifies a book copying system rather than general printing, however, it would have been obvious to one of ordinary skill in the art to modify by broadening thus obtaining the instant application. Omission of a reference element whose function is not needed would be obvious to one of ordinary skill in the art.

The claims are likely allowable if the double patenting rejection is overcome.
